This is an example of a teacher checklist I used for my Content Area Assessment Plan on Kindergarten geometry. The assessment called for students to place certain shapes in the correct position relative to another object. For example, I would say, “Place the square next to the stuffed animal,” and students would do so. The position words are listed at the top of the checklist, and each student would receive a check for using the word correctly (putting the shape in the correct place) and identifying the shape correctly.
